PROFILE

.NET and Azure integration engineer with 5 years of software engineering experience building REST APIs, event-driven integrations, and cloud services for Healthcare, Finance, and Logistics. Delivers secure, observable APIs on Azure (Functions, Service Bus, APIM, Entra ID, Key Vault) and serverless workloads on AWS (Lambda, S3, CloudFront, Terraform, CDK). Full-stack with Angular and React, hands-on with AI workflows through Microsoft Copilot Studio, and experienced in code reviews and mentoring junior engineers.

CORE SKILLS

Backend: C#, .NET 6/8/10, ASP.NET Core Web API, REST, Microservices, Entity Framework, LINQ, Python

Azure: Functions, Service Bus, API Management, Data Factory, App Services, Blob Storage, Entra ID, Key Vault, Application Insights

AWS: Lambda, S3, CloudFront (OAC), Amazon Connect (contact flows, IVR), CDK, Terraform, Serverless

Frontend: Angular 18, React, TypeScript, JavaScript, Tailwind CSS, Zustand, REST API integration

Data: SQL Server (schema design, stored procedures, query optimisation), NoSQL, ETL pipelines

DevOps: Azure DevOps, CI/CD Pipelines, ARM Templates, Docker, Git

Security & Patterns: OAuth2, JWT, Identity Server, Event-Driven Architecture, CQRS, Retry & DLQ, Structured Logging

AI: GitHub Copilot, Claude Code, Microsoft Copilot Studio, AI-assisted development workflows

PROFESSIONAL EXPERIENCE

Acelucid Technologies Private Limited **Nov 2021 – Sep 2026**

Software Engineer II (Apr 2024 – Sep 2026) · Software Engineer I (Nov 2021 – Mar 2024)

Healthcare Support System *Apr 2023 – Sep 2026*

Stack: .NET 6/8/10 · Angular 18 · TypeScript · Azure Functions · Service Bus · APIM · Entra ID · Identity Server · Key Vault · Application Insights · SQL Server · Copilot Studio

- Designed and delivered REST APIs on Azure, published through API Management with OAuth2/JWT and Entra ID for centralised governance, versioning, and access control.
- Built event-driven integrations with Azure Functions and Service Bus, handling high-volume message processing with retry policies, dead-letter handling, and correlation-ID structured logging.
- Set up Application Insights dashboards and alerts, enabling proactive alerting on production failures instead of user-reported incidents; contributed to orchestration workflows and incident response.
- Refactored SQL Server stored procedures and implemented role-based data filtering, significantly reducing execution time on key reporting queries.
- Integrated Identity Server authentication and centralised secrets for all environments in Azure Key Vault.
- Built the Angular 18 frontend in TypeScript, with role-based views, reactive forms, and route guards backed by the .NET APIs and Identity Server authentication.
- Integrated Microsoft Copilot Studio with backend APIs to add AI-assisted, conversational workflows to the platform.
- Built and maintained ETL pipelines moving and transforming data across integrated systems for downstream reporting and analytics.
- Reviewed code and mentored junior engineers on .NET best practices, unit testing, and clean architecture; led requirement discussions with product owners, QA, and clinical stakeholders to keep API contracts compliant with healthcare data-privacy needs.

AWS & Frontend Client Engagements

Stack: AWS Lambda · S3 · CloudFront · Amazon Connect · CDK · Terraform · Node.js · Python · React

- Built a private file-sharing pipeline for an EdTech client using CloudFront and S3 with Origin Access Control, keeping content off public URLs.
- Upgraded a shared AWS CDK constructs library to Node 24, resolved workspace dependency conflicts, and migrated it to AWS SDK v3.
- Provisioned Lambda and S3 infrastructure with Terraform and built Amazon Connect contact flows with IVR routing.
- Worked on migrating an Angular admin panel to React (Tailwind CSS, shadcn/ui, Zustand, Axios) against an unchanged .NET backend.

Manufacturing Inventory Management – Stone & Monument Industry *Nov 2021 – Aug 2022*

Stack: ASP.NET MVC · ASP.NET Web API · jQuery AJAX · C# · Entity Framework · SQL Server

- Built an inventory management system for a stone and monument manufacturing client, tracking raw material, production stages, and finished-goods stock through an ASP.NET MVC admin panel with jQuery AJAX for partial-view updates and dynamic grid filtering.
- Exposed REST APIs (ASP.NET Web API) for mobile and external integrations into inventory levels and order status.
- Designed the database schema for tracking stone inventory across procurement, production, and dispatch stages.

Logistics Warehouse Portal *Sep 2022 – Apr 2023*

Stack: ASP.NET MVC · jQuery AJAX · Angular (embedded components) · C# · Entity Framework · SQL Server · Razor Views

- Built a logistics warehouse management module using ASP.NET MVC with jQuery AJAX for asynchronous stock updates, covering inbound/outbound stock movement, shipment tracking, and operational dashboards.
- Implemented Razor-based UI workflows for warehouse staff with role-based views, using jQuery AJAX calls to MVC controller actions for inline edits without full page reloads.
- Optimised SQL Server queries for inventory lookups and movement history at warehouse scale.
- Embedded a standalone Angular component within select MVC/Razor views for a real-time shipment-tracking widget, bridging data between the component and MVC controller actions via jQuery AJAX.

Eureka Outsourcing Solutions Private Limited **Apr 2021 – Oct 2021**

Customer Service Representative

- Managed client email communication for API requests, gathering requirements and coordinating with the technical team through to resolution.

Aurum E-Serve LLP **Jun 2019 – Mar 2021**

Customer Support Associate

- Performed payment gateway reconciliation, matching transactions against internal records and resolving discrepancies.
- Managed internal and client email communication, tracking requests and following up to closure.

EDUCATION

Bachelor of Computer Applications (BCA) – Dewan Institute of Management Studies **2016 – 2019**
